CLAIMS

We claim:

1. (Currently amended) A polymer electrolyte comprising:

a modified chlorine containing polymer having an enhanced chlorine level relative to a chlorine content of an unmodified chlorine containing polymer formed from polymerization of its monomer;

a salt of an alkali metal; and an aprotic solvent,

wherein said polymer electrolyte is a single phase material comprises a solid homogeneous material formed by dissolving comprising said salt [[,]] and said aprotic solvent integrated with [[and]] said modified polymer material in a common solvent to form a homogeneous solution, and drying said homogeneous solution to remove said common solvent.

- 2. Cancelled.
- 3. (Previously presented) The polymer electrolyte of claim 1, wherein said chlorine containing polymer is polyvinylchloride (PVC).
 - 4. (Cancelled)
 - 5. (Cancelled)

{WP267988;1}

- (Currently amended) The polymer electrolyte of claim 1, wherein said 6. modified chlorine containing polymer comprises C-PVC, said C-PVC having 60-72 wt % chlorine.
- (Original)The polymer electrolyte of claim 6, wherein said polymer 7. electrolyte comprises 10-40 wt % of said C-PVC.
- (Original)The polymer electrolyte of claim 1, wherein said alkali metal 8. salt is at least one selected from the group consisting of LiClO₄, LiBF₄. LiAsF₆, LiPF₆, LiCF₃SO₃ and LiN(CF₃SO₂)₂.
- (Previously presented) The polymer electrolyte of claim 1, wherein said 9. polymer electrolyte comprises from 3-20 wt % of said salt of an alkali metal.
- (Original)The polymer electrolyte of claim 1, wherein as said aprotic 10. solvent is at least one selected from the group consisting of propylene carbonate, ethylene carbonate, dimethyl carbonate, gamma-butyrolactone, 1,3-dioxolane and dimethoxyethane.
- (Previously presented) The polymer electrolyte of claim 1, wherein said 11. polymer electrolyte comprises 40-82 wt % of said aprotic solvent.
- (Currently amended) A rechargeable battery, comprising: 12. {WP267988;1}

Job-176

an anode containing an alkali metal;

a cathode; and

a polymer electrolyte formed from a modified chlorine containing polymer having an enhanced chlorine level relative to a chlorine content of an unmodified chlorine containing polymer formed from polymerization of its monomer, a salt of an alkali metal; and an aprotic solvent, wherein said [[wherein said]] polymer electrolyte is a single phase material comprises a solid homogeneous material formed by dissolving comprising said salt [[,]] and said aprotic solvent integrated with [[and]] said modified polymer material in a common solvent to form a homogeneous solution, and drying said homogeneous solution to remove said common selvent.

13. Cancelled

- (Currently amended) The rechargeable battery of claim 13, wherein said 14. modified [[halogen]] chlorine containing polymer comprises chlorinated polyvinylchloride (C-PVC).
- (Original)The rechargeable battery of claim 12, wherein in said anode 15. comprises lithium.
 - 16. (Cancelled)
 - 17. (Cancelled)

{WP267988;1}

4

Job-176

- (Previously presented) The rechargeable battery of claim 12, wherein said 18. anode comprises a lithium-ion intercalation material.
- (Original)The rechargeable battery of claim 12, wherein said cathode 19. comprises a metal oxide.
- (Original)The rechargeable battery of claim 12, wherein said cathode 20. comprises a lithium-transition metal oxide.
- (Original)The rechargeable cell of claim 12, wherein said cathode is at 21. least one selected from the group consisting of MnO2, LiMn2O4 and vanadium oxides (V_xO_y) .
- (Original)The rechargeable cell of claim 12, wherein said cathode 22. comprises a organic polymer.
- (Original)The rechargeable cell of claim 12, wherein said cathode is at 23. least one selected from the group consisting of polyviologen, polyacetylene and polypyrrole.
- (Original) The rechargeable cell of claim 12, wherein said cathode 24. comprises a sulfur containing material.

{WP267988;1}

25. (Original) The rechargeable cell of claim 12, wherein said cathode is at least one selected from the group consisting of TiS₂, S, polysulphide and polythiophene.

26-36 (Cancelled)
